

heliomotion

solar tracking power plant

4 different
sizes available

- ✓ Complete solar energy solution shipped on a single pallet
- ✓ Straightforward installation with illustrated assembly guide
- ✓ Produce your own electricity and reduce your power bill
- ✓ 30-70% more energy generated depending on latitude
- ✓ Premium quality and elegant design
- ✓ A sustainable choice for a greener tomorrow

Produce your own electricity – anywhere you want it

Heliomotion is a freestanding solar power plant for residential and commercial use. By tracking the sun, and using high efficiency solar panels, a Heliomotion produces up to 70% more energy per year compared to a conventional rooftop installation of the same size.

As the chart shows, a Heliomotion produces energy from early morning to late evening. This provides a good match to the energy consumption pattern of a typical household.

Our products

Heliomotion solar power plants are designed and manufactured in Finland. They are available in several sizes for either on-grid or off-grid use. If additional power is needed multiple units can be placed near each other, for instance to supply power to a microgrid. To find out more about our solutions please visit heliomotion.com or contact us at heliomotionuk@gmail.com

Heliomotion PV-3S
Rated output: 1200 watt
Daily production: 9-15 kWh
Annual production: 1400-2700 kWh
Size: 2.0x3.0 m

Heliomotion PV-4S
Rated output: 1600 watt
Daily production: 12-19 kWh
Annual production: 1800-3600 kWh
Size: 2.0x4.0 m

Heliomotion PV-6S
Rated output: 2400 watt
Daily production: 18-27 kWh
Annual production: 2800-5300 kWh
Size: 3.0x4.0 m

* Heliomotion S models use LG Neon 400 watt panels
